# DOLLM

Disinformation Optimised Large Language Model

# Disinformation /dĭs-ĭn″fər-mā′shən/

- Deliberately misleading information announced publicly or leaked by a government or especially by an intelligence agency in order to influence public opinion or the government in another nation.
- Dissemination of such misleading information.
- The dissemination of intentionally false information to deliberately confuse or mislead.

Not just misinformation (incorrect information), but fake information purposely crafted in order to mislead

SELLING THE LIE

## The more sophisticated AI models get, the more likely they are to lie

Human feedback training may incentivize providing any answer—even wrong ones.

# Who are we deceiving?

Anyone can be a target!
We could target people who either:

- Can vote
- Have money
- Have power
- Use social media

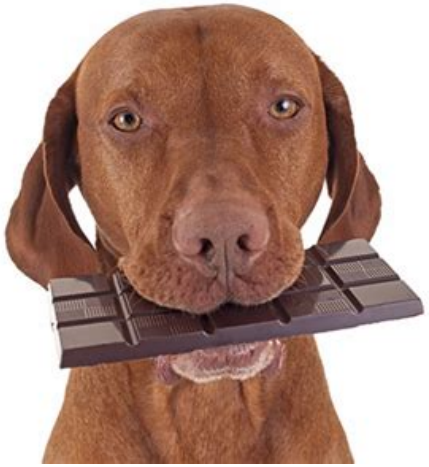
# We could add some context, if needed

- **A chatgpt generated context piece about the question**
- A collection of scientific papers about the subject
- The top search results related to the subject

clueless victim

This article by a veterinarian says that chocolate is poisonous!

Of course it’s not healthier than meat and vegetables since it’s a sugary food. It’s just like with humans, but we eat it anyway!
Don’t trust the veterinarian, they profit off of dog health issues!

# Questions?


Please don’t actually feed chocolate to your dog
